

Aneesa Atther

annuatther629@gmail.com | GitHub | Bangalore, Karnataka, India

SKILLS

Languages: Python, Java, Kotlin, SQL, JavaScript

CS Fundamentals: Data Structures & Algorithms, OOP, Time/Space Complexity, System Design Basics

AI/ML & Evaluation: LLM Prompt Evaluation, RLHF, Model Benchmarking, Reward-Hack Analysis, Code Review & Debugging, Supervised Learning, EDA

QA & Data: Automated QA Platforms, Data Validation, Firebase, Room DB, REST APIs

Dev Tools: Git/GitHub, VS Code, Jupyter, Docker (Basics), CI/CD Concepts

Mobile: Android Development, MVVM, Retrofit

EXPERIENCE

AI Trainer – Handshake AI Fellowship

Jan 2026 – Present

LLM Evaluation & Benchmark Design (Contract, Remote)

- Authored and evaluated 100+ domain-specific prompts across 6 technical domains, surfacing accuracy and depth gaps that fed directly into model retraining.
- Audited a 28-scenario benchmark engine and uncovered 2 novel exploit cruxes, strengthening reward-hack resistance without disrupting existing tasks.
- Advanced a constraint-satisfaction benchmark task to conditional proposal approval by building a working solver used to validate difficulty computationally.

QA Specialist – Robotic Training Data

Feb 2026 – Present

Instawork

- Sustained 95%+ accuracy while validating 50+ robotic manipulation videos daily using automated A–F scoring and Green/Yellow/Red classification.
- Cut downstream data-quality issues by flagging low-confidence videos for review and documenting recurring clamp-operation defect patterns in daily/weekly reports.

Android Developer – Gen AI Applications

Feb 2026 – May 2026

Mind Matrix

- Built core features for Namma-Railu Buddy, a GenAI Android app, including GPS-based alarms and offline-first sync via Firebase, Room, and Retrofit (MVVM).
- Collaborated on Gemini API-based natural-language commuter assistance and led technical requirement documentation for the release.

PROJECTS

LLM Benchmark Verifier Suite | *Python, Pytest, Prompt Engineering*

- Built a verifier and scenario-testing harness standardizing pass/fail rubrics, cutting manual re-checking of LLM outputs for Handshake AI evaluations.
- Automated rubric scoring against 6 domain checklists, reducing evaluation turnaround time for benchmark task reviews.

AI Code Review Assistant | *Python, LLM API, Static Analysis, Prompt Engineering*

- Built a tool that combines static-analysis output with LLM-based reasoning to flag bugs, security issues, and style violations in pull requests before human review.
- Designed structured prompts to generate fix suggestions with reasoning, cutting review turnaround time and catching edge cases plain linters missed.

Fake Product Detection using Blockchain | *Solidity, Truffle, Ganache*

- Built a blockchain-based authenticity verifier using unique product IDs and on-chain records, with smart contracts tested via Truffle and Ganache.
- Designed the transaction schema to enforce immutable, tamper-proof product-lifecycle tracking across the supply chain.

EDUCATION

Sri Krishna Institute of Technology

2022 – 2026

B.E., Artificial Intelligence and Machine Learning; CGPA: 8.06

Bangalore, India

ACHIEVEMENTS

3rd Place, AI4ComUnity Hackathon, Acharya Institutes (May 2025) | Participant, HackSpark 2025, Sri Venkateshwara College of Engineering (May 2025)
